DETAILED ACTION

Priority

1. If applicant desires priority under 35 U.S.C. 119(e) based upon a previously filed application, specific reference to the earlier filed application must be made in the instant application. This should appear as the first sentence of the specification following the title.

Specification

2. This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

Claim Objections

3. Claim 6 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 1761

6. Claim 3 recites "at least one passage". However, parent claim 1 recites "passing said liquid food product to be treated at least two times through... a dynamic high pressure homogenizer". It is not clear how dependent claim 3 can require only "at least one passage", when this is outside the "at least two"-range of parent claim 1.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

8. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Clark et al [Pat. No. 5,232,726].

Clark et al teach a method of homogenizing and reducing bacteria by pressurizing citrus juice to at least 103 MPa (abstract), passing it through a high-pressure homogenizer for a full minute (column 3, line 39) which would have inherently provided multiple passes through the homogenizer, collecting the homogenized juice (column 3, line 40), reduction of bacteria such as *Saccharomyces cerevisia* (column 6, line 15), and a temperature of 78°F (column 3, line 46).

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Paquin et al [Pat. No. 6,511,695], Gallaher et al [Pat. No.

Art Unit: 1761

5,965,190], and Lelieveld et al [Pat. No. 6,231,908] teach methods of homogenizing liquid foods.
